

Training course as first aid personnel for hyperbaric work and for company first aid personnel

In any business, and especially for hyperbaric work, it is necessary to have sufficient and regularly trained first aiders as well as first aid material available.

In Germany, the number of first-aiders for hyperbaric work is regulated by the compressed-air ordinance. The number of company first aiders, the type and quantity as well as the storage locations of the first-aid material are determined by the risk assessment according to the size of the enterprise, the existing operational risks, the expansion and structure of the company and the organization of the operational rescue services.

Content of the course in accordance with DGUV regulation 1 §26

- Behavior in case of an accident
- Paying attention to your own safety
- Sending the emergency call
- Secure the accident site
- Rescue from acute danger
- First aid measures in case of injury or illness with dysfunction

Duration: 9 45-minute lessons

Refresher: every 2 years (according to BGV A1 BGG 948)

Due to the different billing procedures, you must take the necessary steps with your responsible accident insurance institution before starting the course.

The trainers are authorized according to DGUV principle 304-001 for the training of first aid personnel.
